SNAP Tools for Coastal and Inland Water Monitoring

Abstract: A series of videos with demos on how to process Sentinel data for Ocean Colour purposes have been recorded and they will be publicly accesible via YouTube (EUMETSAT). The target audience are from ocean colour remote sensing beginners to experts without SNAP knowledge. The demos show how to use the different tools in SNAP for pre-processing, processing and validation of OC products. Primarily focused on Sentinel-3 OLCI, the majority of the tools can also be use with other sensors (Sentinel-2 MSI, Landsat sensors, etc.). In the presentation, we will give a short overview of functionalities and exercises that can be found in the demos.
